I. About this deliverable 3

I. About this deliverable

Initially this deliverable was intended to present the “Semester of Code Book Proposal” instead of present the idea of the Semester of Code Association.

After the different meetings, mainly the Bolton meeting in September 2015 and the project extension, partners decide to substitute this deliverable about the Semester of Code Book proposal for the creation of the Semester of Code Association due practical reasons. The partners agreed that in this project, where was demonstrated that the practical scope is more important than the academic one. For that reason, apart of the several (10) papers published about the project by partners, the book proposal was substituted by the creation of an association that will steer up the future of the project as well as serve as a vehicle for mainstreaming and exploitation of the Semester of Code.

The University of Salamanca, as VALS coordinator, presented the application to create the association to the Spanish Government. This application presents the goals of the association as well as the different rules and possible stakeholders that can be involved in it. In the documents presented within the D8.3b folder are available the documents presented to create the association.
